Book of X-ray fluorescence spectroscopy quantitative analysis of the powder melt and choice. and choice of oxidant. the solubility of oxide in flux . the release agent in the sample distribution. the mechanism of release agent. volatile elements of the melt. and other refractory alloy melt samples from the physical and chemical issues are explored theoretically and with examples of the X-ray fluorescence spectrum in the sample melt conditions. This book is the first field of X-ray fluorescence spectroscopy to explore borate fusion of the physical and chemical behavior of the books. the first author. Dr. Claisse is also the founder of Melt sample preparation method. The book contains the author's nearly 50 years of borate melt film preparation of practical experience and theoretical exploration. Book readers are mainly workers in the majority of X-ray fluorescence spectroscopy. but also as a comprehensive university chemistry and related science and engineering colleges and professional students and teachers reference books.
